APR Composites range of products are manufactured utilising recycled and reclaimed materials. They will not rot, rust, splinter or leach chemicals into the environment, therefore providing the perfect long term, environmentally sound solution for any application.

Our screening products offer both visual appeal and durability – and being non-toxic and splinter free, this makes APR Composites screening ideal for open space structures such as adventure parks, playgrounds and schools.

All APR Composites products are custom designed, engineered and manufactured in Australia to your specific needs, which means you get exactly what you need with *no waste*. They are also easy to install and require very little maintenance, if any at all.
